WENH WisdomTree Strategic Metals UCITS ETF - EUR Hedged Acc

Investment Objective

The WisdomTree Strategic Metals UCITS ETF (the “Fund”) seeks to track the price and yield performance, before fees and expenses, of the WisdomTree Energy Transition Metals Commodity UCITS Total Return Index (the "Index"). The Index is designed to track the performance of a diversified basket of commodity metals that are associated with energy transition themes, which include, but are not limited to, electric vehicles, transmission, charging, energy storage, solar, wind and hydrogen production. The share class seeks to deliver exposure to the Index while at the same time neutralising exposure to fluctuations of the Euro, by implementing a FX hedging methodology.

Index Description

The Index was developed by WisdomTree, Inc. (“WT”), in collaboration with third party specialists in the energy transition space. The selection and weighting of index components is based on an intensity rating, created in collaboration with third party specialists, which measures the exposure and growth metrics for each commodity within the usage of energy transition technologies, as well as each commodity’s market balance.
The maximum weight of each commodity is capped at 20% at the rebalance. The Index is reconstituted on a semi-annual basis. Excess and total return versions of the Index are calculated and published.

Potential Benefits

The energy transition - the electrification and decarbonisation of the energy system - has become a large driver of demand for metal commodities.

The ETF offers exposure to a diversified basket of metal commodities that are involved in energy transition technologies, such as electric vehicles, transmission, charging, energy storage, solar, wind, and hydrogen production.

The research for the selection and weighting of commodities in the Index and, subsequently, the ETF, is conducted by experts in the energy transition space, ensuring the portfolio basket remains focused and relevant.

Forward looking, with weights assigned to metals in the basket factoring in both energy-transition related demand and market balance.

Currency volatility is minimised through the use of currency forward contracts.

The ETF is UCITS compliant.

Potential Risks

Although the Index was created to select commodity metals with a relatively higher exposure to the energy transition theme, there is no guarantee this objective will be achieved.

An investment in commodities may experience high volatility and should be considered as a longer term investment.

The performance of commodity futures based indices may differ significantly from commodity spot prices.

The returns payable on the Fund are dependent on payments received by the Fund from the swap counterparty under the terms of the relevant swap and therefore are subject to the credit risk of the swap counterparty.

The return of the forward currency contracts, which are rolled on a monthly basis, are designed to minimise currency fluctuations but may not perfectly offset the actual fluctuations.

This list does not cover all risks-further risks are disclosed in the KIID and Prospectus.

Glossary

Dividend Weighted Index: an index that determines the weight of its constituents using the dividends paid by the security rather than another variable (the most common is Market Cap weighted indices).

Fully Replicated: assets are invested in securities that match the constituents of the relevant index, in the same proportion.

Fundamentally Weighted Index: an index that weights securities on the basis of factors such as dividends or earnings.

Large Cap, Mid Cap and Small Cap: refers to market capitalisation and is calculated by multiplying the price of a stock by the number of shares outstanding.

Listing currency: the trading currency on the exchange.

Physical (Optimised): assets are predominantly invested in securities that are constituents of the index, but may also hold securities whose characteristics closely resemble the characteristics of the index.

Physically Backed: securities held by the fund are the actual securities not a derivative.

Rebalance: An index is created by applying a certain set of selection and weighting rules of countries, sectors and stocks at a certain frequency. A Rebalance is when WisdomTree re-applies its rules based selection and weighting process.

Rebalance Frequency: The frequency by which the constituents of the index are screened and their weights changed.

Replication Method: the method by which the fund gets exposure to the benchmark index.

Share class currency or the "NAV currency": The currency that the fund's NAV is issued in.

Total Expense Ratio (TER): A measure of the total costs associated with managing and operating a fund. The TER consists primarily of management fees plus other expenses such as trustee, custody and operating expenses. It does not cover the swap fee. The TER is expressed as a percentage of the fund's total net asset value.
