DGRB WisdomTree US Quality Dividend Growth UCITS ETF - GBP Hedged

Investment Objective

WisdomTree US Quality Dividend Growth UCITS ETF - GBP Hedged (the "Fund") seeks to track the price and yield performance before fees and expenses, of the WisdomTree US Quality Dividend Growth Index (the "Index"). The Index aims to track the performance of high quality, dividend-growing companies in the US. The share class seeks to deliver exposure to the index while at the same time neutralising exposure to fluctuations of the GBP, by implementing a FX hedging methodology.

Index Description

The Index is rules-based, fundamentally weighted and is comprised of high-quality dividend-paying US companies, risk-filtered using a composite risk score ("CRS") screening which is made up of two factors (quality and momentum) each carrying an equal weighting. The index excludes companies which do not meet WisdomTree's ESG (environmental, social and governance) criteria.
To be included in the index, companies must meet certain risk management criteria, as well as minimum liquidity requirements, WisdomTree's ESG screen and have paid dividends over the prior annual cycle.
At each annual rebalancing, the 200 largest companies in the eligible universe are selected based on a composite score of two fundamental factors: growth and quality. The growth factor is determined by a company's ranking based on a combination of median analyst earnings growth forecast, trailing 5-year earnings growth, and trailing 5-year sales growth. The quality factor is determined by return on assets and return on equity. The selected constituents are then weighted according to the total cash dividends. Companies which pay more dividends are more heavily weighted. Portfolio weights are further optimised to manage exposure to individual stocks and sectors, ensuring a diversified and risk-aware allocation.

Glossary

Dividend Weighted Index: an index that determines the weight of its constituents using the dividends paid by the security rather than another variable (the most common is Market Cap weighted indices).

Fully Replicated: assets are invested in securities that match the constituents of the relevant index, in the same proportion.

Fundamentally Weighted Index: an index that weights securities on the basis of factors such as dividends or earnings.

Large Cap, Mid Cap and Small Cap: refers to market capitalisation and is calculated by multiplying the price of a stock by the number of shares outstanding.

Listing currency: the trading currency on the exchange.

Physical (Optimised): assets are predominantly invested in securities that are constituents of the index, but may also hold securities whose characteristics closely resemble the characteristics of the index.

Physically Backed: securities held by the fund are the actual securities not a derivative.

Rebalance: An index is created by applying a certain set of selection and weighting rules of countries, sectors and stocks at a certain frequency. A Rebalance is when WisdomTree re-applies its rules based selection and weighting process.

Rebalance Frequency: The frequency by which the constituents of the index are screened and their weights changed.

Replication Method: the method by which the fund gets exposure to the benchmark index.

Share class currency or the "NAV currency": The currency that the fund's NAV is issued in.

Total Expense Ratio (TER): A measure of the total costs associated with managing and operating a fund. The TER consists primarily of management fees plus other expenses such as trustee, custody and operating expenses. It does not cover the swap fee. The TER is expressed as a percentage of the fund's total net asset value.
