

# GGRB WisdomTree Global Quality Dividend Growth UCITS ETF - GBP Hedged

## Investment Objective

The Fund seeks to track the price and yield performance, before fees and expenses, of the WisdomTree Global Developed Quality Dividend Growth Index. The share class seeks to deliver exposure to the index while at the same time neutralising exposure to fluctuations of the GBP, by implementing a FX hedging methodology.

### Index Description

The index is rules-based, fundamentally weighted and is comprised of high quality dividendpaying companies from global developed markets, risk-filtered using a composite risk score ("CRS") screening, which is made up of two factors (quality and momentum), each carrying an equal weighting. The index excludes companies which do not meet WisdomTree's ESG (environmental, social and governance) criteria. To be included in the index, companies must meet certain risk management criteria, as well as minimum liquidity requirements, WisdomTree's ESG screen and have paid dividends over the prior annual cycle. The index on rebalancing date is comprised of the top 600 companies in the eligible universe based on the combination of growth and quality characteristics. The component companies are then weighted annually in the index based on dividends paid over the prior annual cycle. Companies that pay more dividends are more heavily weighted.

## Glossary

**Dividend Weighted Index:** an index that determines the weight of its constituents using the dividends paid by the security rather than another variable (the most common is Market Cap weighted indices).

Fully Replicated: assets are invested in securities that match the constituents of the relevant index, in the same proportion.

Fundamentally Weighted Index: an index that weights securities on the basis of factors such as dividends or earnings.

Large Cap, Mid Cap and Small Cap: refers to market capitalisation and is calculated by multiplying the price of a stock by the number of shares outstanding.

Listing currency: the trading currency on the exchange.

Physical (Optimised): assets are predominantly invested in securities that are constituents of the index, but may also hold securities whose characteristics closely resemble the characteristics of the index.

Physically Backed: securities held by the fund are the actual securities not a derivative.

**Rebalance:** An index is created by applying a certain set of selection and weighting rules of countries, sectors and stocks at a certain frequency. A Rebalance is when WisdomTree re-applies its rules based selection and weighting process.

Rebalance Frequency: The frequency by which the constituents of the index are screened and their weights changed.

Replication Method: the method by which the fund gets exposure to the benchmark index.

Share class currency or the "NAV currency": The currency that the fund's NAV is issued in.

Total Expense Ratio (TER): A measure of the total costs associated with managing and operating a fund. The TER consists primarily of management fees plus other expenses such as trustee, custody and operating expenses. It does not cover the swap fee. The TER is expressed as a percentage of the fund's total net asset value.
