CRRY WisdomTree Enhanced Commodity Carry

Investment Objective

WisdomTree Enhanced Commodity Carry is a fully collateralised, UCITS eligible Exchange Traded Commodity (ETC) designed to provide investors with a total return exposure to a basket of Commodity futures contracts. The ETC provides a total return comprised of the daily performance of the BNP Paribas Enhanced Commodity Carry Excess Return Index (BNPIF73P), plus the interest revenue adjusted to reflect fees and costs associated with the product.

For example, if the BNP Paribas Enhanced Commodity Carry Excess Return Index rises by 1% over a day, then the ETC will rise by 1%, excluding fees. However if the BNP Paribas Enhanced Commodity Carry Excess Return Index falls by 1% over a day, then the ETC will fall by 1%, excluding fees.

The BNP Paribas Enhanced Commodity Carry Excess Return Index provides an exposure to the difference in performance of two underlying commodity indices seeking to generate positive returns that are independent of the commodity market environment. Its objective is therefore not to directly track movements in commodity markets.

The BNP Paribas Enhanced Commodity Carry Excess Return Index also utilises leverage, meaning that its value may rise or fall more than the difference in performance of the two commodity indices to which it has exposure.

Index Description

The BNP Paribas Enhanced Commodity Carry ER Index (the "Index") is a BNP Paribas index that extracts a leveraged premium (also known as the commodity carry factor) from the difference in the carry cost between the long and short positions in futures contracts of the same set of underlying commodities with different maturities.

The Index is designed as "absolute return indices", which are indices that generally seek to generate positive returns that are independent of the market environment for a particular asset class. By establishing offsetting short and long positions in futures contracts of the same set of underlying commodities, the targeted exposure aims to be commodities market-neutral except for the maturity profile of the long positions compared to the short positions which is expected to generate positive performance.

To maintain an "absolute return" profile, the Index resets its long and short exposures to 300% and -300%, respectively, on a monthly basis.

During the period between two monthly rebalancing dates, the effective exposures of the long and short legs may not equal 300% and -300% due to the differences in their returns.

The maturity of the exposures and frequency of rolling the exposures differs between the long position and the short position.

More information on the above Index, such as details of the index calculation and construction methodology appear in the index handbook which can be found at: https://indx.bnpparibas.com/

Performance (Net of fees) (USD)

Name	QTR	YTD	1-Year	3-Year	Inception Date
CRRY NAV	-7.90%	-25.78%	-25.62%	N/A	-15.05%
BNP Paribas Enhanced Commodity Carry Excess Return Index	-8.61%	-27.44%	-27.89%	N/A	-17.52%

Source: WisdomTree UK, Bloomberg, as of 30/09/2026. Performance for the fund and the Index is shown in the listing currency. Past performance is not a reliable indicator of future results. Performance of less than one year is cumulative.

This document is marketing material. Investors should read the prospectus of the Issuer ("Prospectus") and the key information document ("KID") before investing and should refer to the section of the Prospectus titled 'Risk Factors' for further details of risks associated with an investment in this product.

Potential Benefits

Gain exposure to a leveraged premium (also known as the commodity carry factor) from the difference in the carry costs between the long and short positions in futures contracts of the same set of underlying commodities

UCITS eligible and fully collateralised.

Transparent performance and fees.

Easy to invest: rules based exposure to the carry factor without the need to manage commodity futures

Risk Management: You cannot lose more than the amount invested.

Liquidity: Trades on exchange, with multiple authorised participants (APs) and market makers (MMs).

Potential Risks

An investment in an ETP involves a degree of risk. Any decision to invest should be based on the information contained in the relevant prospectus. Prospective investors should obtain independent accounting, tax and legal advice and should consult their professional advisers to ascertain the suitability of this ETP as an investment to their own circumstances.

This ETP is structured as a debt security and not as shares (equity) and can be created and redeemed on demand by authorised participants and traded on exchange just like shares in a company. This ETP is not a UCITS product.

Investing in ETPs that incorporate leverage is only suitable for sophisticated and or informed investors who understand leverage, impact of rebalancing and compounded returns and are willing to magnify potential losses. Any investment in a short or leveraged ETP should be monitored regularly to ensure consistency with your investment strategy. In extreme volatility, returns of leveraged ETPs may under-perform expected returns because of protection mechanisms within the ETP structure, intended to protect against market crashes between rebalance. Market Risk: The value of securities in this ETP is directly affected by increases and decreases in the value of the Index. Accordingly, the value of a security may go up or down and a security holder may lose some or all of the amount invested but can not lose more than the amount invested.

Liquidity risk: There can be no certainty that securities can always be bought or sold on a stock exchange or that the market price at which the securities may be traded on a stock exchange will always accurately reflect the performance of the Index.

Currency Risk: The price of securities in this ETP is generally quoted in USD. To the extent that a security holder purchases securities in another currency, the value will be affected by changes in the exchange rate.

Counterparty risk: The Issuer is reliant on there being swap counterparties available to enter into swap agreements on a continuing basis and, if no swap counterparties are willing to do so, the ETP will not be able to achieve its investment policy of tracking the performance of the Index.

Credit Risk: The Issuer is subject to the risk that third party service providers may fail to return property or collateral belonging to the Issuer or pay money due to the Issuer. The ETP is backed by swaps. The payment obligations of the swap counterparties to the Issuer are protected by collateral held which is marked to market daily. The collateral is held in segregated accounts at The Bank of New York Mellon. In the event a swap counterparty defaults, the proceeds from realisation of the collateral may be less than what the investor expects. Details of the collateral held can be found in the Collateral section of the WisdomTree website (www.wisdomtree.com).

The performance of commodity indices may differ significantly from spot commodity prices, which are often quoted in the financial press, as the spot in itself is not investable. An investment in commodities may experience high volatility and should be considered as a longer term investment.

Long and short exposure: The Index includes long and short exposure to certain commodities futures which means that the Index value might decrease even if the underlying commodity futures prices increase

Please see the risks factors section of the Prospectus for a more detailed discussion of the potential risks.

Glossary

Authorised participant: Banks or other financial institutions that act as intermediaries between issuers of securities and other investors or intermediaries. Authorised participants subscribe for and redeem securities directly with the Issuer and buy and sell those securities to investors intermediaries either directly or via stock exchanges.

Collateral held: Cash or other transferable securities which are held independently to reduce the Issuer's credit risk in respect of any single counterparty. For example, if the Index (tracked by the ETP) increases, the amount owed to the Issuer by the swap counterparty increases and therefore additional collateral is transferred by the swap counterparty to reduce the increased risk to the ETP of that counterparty.

Exposure: An ETC has exposure to an index or commodity if its value is directly affected by movements in the price of that index commodity. Exposure to an index or commodity can be achieved in various different ways. This ETC aims to provide exposure to the Index using swaps.

Market Makers: Banks or other financial institutions that act as intermediaries between buyers and sellers of securities. They buy and sell securities to investors intermediaries either directly or via stock exchanges.

Swap counterparty: Typically a large bank or financial institution with whom the Issuer enters into swaps

IMPORTANT INFORMATION

Marketing communications issued in the European Economic Area ("EEA") & Switzerland: This document has been issued and approved by WisdomTree Ireland Limited, which is authorised and regulated by the Central Bank of Ireland.

Marketing communications issued in jurisdictions outside of the EEA, except Switzerland: This document has been issued and approved by WisdomTree UK Limited or Atlantic House Investments Limited, which are both authorised and regulated by the United Kingdom Financial Conduct Authority.

WisdomTree Ireland Limited, WisdomTree UK Limited and Atlantic House Investments Limited are referred to as "WisdomTree" (as applicable) throughout. Our Conflicts of Interest Policy and Inventory are available on request.

This marketing communication is intended for all investors; however, the WisdomTree products described in this document and related materials may be restricted in certain jurisdictions and may only be available to particular categories of investors in accordance with applicable laws and regulations. Where a product is not authorised or its distribution is restricted in your jurisdiction, it is the responsibility of any person or entity in possession of this information to inform themselves of, and comply with, all relevant restrictions. Before making any investment, investors should seek appropriate legal, regulatory, tax and investment advice to assess the suitability and implications of investing in these products. Information about WisdomTree products is available at wisdomtree.eu. WisdomTree does not offer investment advice tailored to individual circumstances. Past performance is not a reliable indicator of future performance. Any historical performance included in this document may be based on back testing. Back testing is the process of evaluating an investment strategy by applying it to historical data to simulate what the performance of such strategy would have been. Back tested performance is purely hypothetical and is provided in this document solely for informational purposes. Back tested data does not represent actual performance and should not be interpreted as an indication of actual or future performance. The value of any investment may be affected by exchange rate movements. Any decision to invest should be based on the information contained in the appropriate prospectus and after seeking independent investment, tax and legal advice. The content of this document does not constitute investment advice nor an offer for sale nor a solicitation of an offer to buy any product or make any investment.

This marketing communication should be read in conjunction with the relevant WisdomTree products' Prospectus, Key Investor Information Document ("KIID"), Key Information Document ("PRIIPS KID") as relevant. In particular, investors should carefully read the specific risks detailed under the section entitled 'Risk and Reward Profile' in the KIID, 'What are the risks and what could I get in return?' in PRIIPs KID and under the section entitled 'Risk Factors' in the Prospectus of the Issuer for further details of risks associated with an investment in the product(s) detailed herein. Further information regarding the WisdomTree exchange-traded product(s) detailed herein, such as a detailed list of the underlying investments and the indicative net asset value, can be obtained by visiting the WisdomTree website at (www.wisdomtree.eu).

An investment in WisdomTree exchange-traded products ("ETPs") is dependent on the performance of the underlying index, less costs, but it is not expected to match that performance precisely. An investment in WisdomTree funds is dependent on the performance of the underlying investments, less costs.

Both WisdomTree ETPs and funds involve numerous risks including among others, general market risks relating to any relevant underlying index, credit risks on the provider of index swaps utilised in ETPs, exchange rate risks, interest rate risks, inflationary risks, liquidity risks, derivatives risk and legal and regulatory risks.
