WisdomTree Strategic Metals UCITS ETF - USD Acc

Sustainability-related disclosure

Summary

Aucun objectif d'investissement durable

Le Fonds promeut des caractéristiques environnementales, mais n'a pas d'objectif d'investissement durable.

Caractéristiques environnementales ou sociales du produit financier

Le Fonds promeut l'objectif environnemental de réduction des émissions de carbone générées en investissant principalement dans des matières premières (individuellement, une « Matière première pertinente ») qui sont associées aux thèmes de la transition énergétique, lesquels incluent entre autres les véhicules électriques, la transmission, la recharge, le stockage de l'énergie, le solaire, l'éolien et la production d'hydrogène. La réduction des émissions de carbone est nécessaire pour lutter contre l'impact du changement climatique.

Stratégie d'investissement

L'objectif d'investissement du Fonds consiste à répliquer la performance de l'indice WisdomTree Energy Transition Metals Commodity UCITS Total Return Index (l'Indice) en termes de cours et de rendement, avant déduction des commissions et frais.

Part des investissements

Les investissements seront utilisés pour atteindre la caractéristique environnementale promue par le Fonds, à savoir la réduction des émissions de carbone générées, grâce à l'obtention d'une exposition indirecte à l'Indice qui réplique la performance d'un panier diversifié de matières premières associées aux thèmes de la transition énergétique. De ce fait, au minimum 90 % de la VL du Fonds seront alignés sur la caractéristique environnementale qu'il promeut. Jusqu'à 10 % des avoirs du Fonds peuvent être investis dans des actifs liquides accessoires.

Contrôle des caractéristiques environnementales et sociales

Le Fonds promeut la caractéristique environnementale mentionnée ci-dessus via la réplication synthétique de l'Indice. WisdomTree contrôle la caractéristique environnementale promue par le Fonds lors de chaque rééquilibrage de l'Indice.

Méthodologies

La caractéristique environnementale promue par le Fonds est mesurée au moyen de données obtenues du Fournisseur d'indice et d'un spécialiste tiers du secteur de la transition énergétique.

Traitement et sources des données

Le Fonds est un fonds indiciel à gestion passive et atteint la caractéristique environnementale qu'il promeut en répliquant l'Indice.

WisdomTree traite les données obtenues du Fournisseur d'indice et de spécialistes tiers du secteur de la transition énergétique afin de sélectionner les Matières premières pertinentes, sur la base d'un processus de notation utilisé pour identifier les paramètres d'exposition et de croissance de chaque Matière première pertinente dans la mise en application des solutions de transition énergétique et pour choisir et pondérer les Matières premières pertinentes en conséquence, comme indiqué dans la méthodologie indicielle pour établir l'univers d'investissement éligible.

Limites des méthodologies et données

Pour répondre à l'objectif ainsi qu'à la politique d'investissement spécifiés du Fonds, WisdomTree s'appuie sur des données obtenues du spécialiste tiers qui peuvent s'avérer incomplètes, inexactes ou indisponibles. Recourir à l'expertise de spécialistes tiers pour sélectionner les Matières premières pertinentes implique un risque intrinsèque, rattaché aux erreurs des données de tierces parties qui sont susceptibles de ne pas être détectées par WisdomTree ou le Fournisseur d'indice. Dès lors, il existe un risque que le Fournisseur d'indice ou le spécialiste tiers évalue de manière incorrecte une Matière première pertinente comme associée aux thèmes de la transition énergétique. Cela peut conduire à l'inclusion ou l'exclusion erronée d'une Matière première pertinente de l'Indice et, par conséquent, du portefeuille du Fonds.

Diligence raisonnable

WisdomTree exerce son devoir de diligence raisonnable concernant le Fournisseur d'indice et l'Indice de référence en amont du lancement du Fonds. Dans le cadre de ce contrôle préalable, WisdomTree évalue la méthodologie indicielle afin de déterminer la capacité à atteindre le résultat d'investissement souhaité ainsi que la caractéristique environnementale promue par le Fonds.

Politiques d'engagement

WisdomTree exerce des droits de vote et s'engage de manière constructive auprès des entreprises bénéficiaires des placements, par l'intermédiaire de ses gestionnaires d'investissement auxquels les activités de gestion de portefeuille sont confiées. Lors de la sélection et du suivi des gestionnaires d'investissement, WisdomTree s'assure que leurs politiques de vote et d'engagement correspondent aux normes qu'elle a définies.

Indice de référence désigné

L'Indice a été désigné comme indice de référence afin de respecter les caractéristiques environnementales ou sociales promues par le Fonds. Les informations sur l'Indice sont consultables ici.

No sustainable investment objective

This financial product promotes environmental characteristics but does not have as its objective sustainable investment.

The Fund does not commit to making sustainable investments.

Environmental or social characteristics of the financial product

The Fund promotes the environmental objective of reduction in carbon emissions generated, primarily by investing in Relevant Commodities that are associated with energy transition themes which includes, but are not limited to, electric vehicles, transmission, charging, energy storage, solar, wind and hydrogen production. Reduction in carbon emissions is necessary to combat the impact of climate change. Development of such products and services supports goals to action climate change and ensures access to affordable, reliable sustainable and modern energy for all.

By providing indirect exposure to an index of commodity futures associated with energy transition themes, as described in the Index methodology, the Fund may channel liquidity into the relevant commodity market(s) and may promote the accessibility of commodities associated with energy transition themes to investors.

The Index has been designated as a reference benchmark to determine whether the Fund is aligned with the environmental characteristic that it promotes.

Investment strategy

The investment objective of the Fund is to track the price and yield performance, before fees and expenses, of the Index. In order to do so, the Fund will employ a "passive management" (or indexing) investment approach to gain indirect exposure to the individual constituents of the Index, which are associated with energy transition themes.

The Fund will enter into Swap(s) with a counterparty which provide exposure to the performance of the Index. Such Swaps will either follow the Short Basket Swap Model, the Funded Swap Model or the Unfunded Swap Model as described in detail in the Prospectus. Under the Unfunded Swap Model, the Fund may exchange the return on a stream of cash flows, such as a US Treasury Bill return, with the swap counterparty in exchange for the return of the Index. Under the Short Basket Swap Model, substantially all cash which is not required to meet the Fund's operational, liquidity or ancillary requirements will be invested into a portfolio of equity securities, while the Swap exchanges the performance of the equity portfolio with the return of the Index. Where the Fund utilises the Funded Swap Model, substantially all cash received from the subscription of Shares will be transferred to the swap counterparty in accordance with the terms of the Swap in exchange for the return of the Index. The Fund may, in accordance with the investment policy set out in this Supplement and subject to the requirements of the Prospectus and the Central Bank, convert in whole or in part between the Short Basket Swap Model, the Funded Swap Model and the Unfunded Swap Model, where it considers such conversion to be in the best interests of its investors.

Counterparties are selected based on a range of financial, risk, reputational and other criteria, in accordance with the guidance of the Central Bank of Ireland.

Any residual cash held by the Fund for operational, liquidity or ancillary purposes, which is not invested in Swaps or (in the case of the Short Basket Swap Model) equity securities, will be invested in eligible money market instruments and/or short-term debt securities such as US Treasury Bills, short dated government backed securities and floating rate notes (such as debt securities with varying maturities), commercial paper and certificates of deposit, each of which, where relevant, will be of investment grade at the time of acquisition.

Proportion of investments

The Fund's investments will be used to attain the environmental characteristic promoted by the Fund of reduction in carbon emissions generated by gaining indirect exposure to the Index which tracks the performance of a diversified basket of commodities that are associated with energy transition themes. The Fund will achieve this objective through the use of swaps which provides the Fund with the performance of the Index. As a result a minimum of 90% of the Fund's NAV will align with the environmental characteristic promoted by the Fund.

Up to 10% of the Fund's assets may be invested in ancillary liquid assets in accordance with the UCITS Regulations or invested commodities which no longer meet the environmental criteria described above but will not be removed from the Index until the next Index rebalance. For more information, please see the Supplement for the Fund.

Monitoring of environmental or social characteristics

The Fund promotes the environmental characteristic outlined above (under the section "Environmental or social characteristics of the financial product") by synthetically replicating the Index. As such, WisdomTree will monitor the Fund's ability to track the Index in line with the investment strategy of the Fund. WisdomTree monitors the tracking error of the Fund throughout the lifecycle of the Fund to ensure it is within its limits published in the Supplement.

WisdomTree also monitors the Fund's adherence to the environmental characteristic it seeks to promote at each Index rebalance. Each Relevant Commodity receives an energy transition demand rating (the "Energy Transition Demand Rating") to measure the attainment of the environmental characteristic it promotes. The total ETDR of the Index (and by extension, the Fund) is calculated as the weighted average of the individual ETDR of each Relevant Commodity. The Energy Transition Demand Rating for each Relevant Commodity associated with the energy transition is used to measure the attainment of the environmental characteristic promoted by the Fund as further described under the section "Methodologies" below. It is expected that commodities with a higher Energy Transition Demand Rating have a relatively larger forward-looking impact on the energy transition. The Energy Transition Demand Rating forms part of the Index construction and is updated and monitored continuously in line with the Index methodology.

Methodologies

The environmental characteristic promoted by the Fund are measured using data from the Index Provider and a third-party specialist in the energy transition industry.

In order to measure the environmental characteristic promoted by the Fund, each Relevant Commodity receives an Energy Transition Demand Rating, which is calculated as the 3-year estimated consumption within energy transition divided by the current total consumption as further explained in the Index methodology. The higher the ETDR of a Relevant Commodity, the greater the anticipated contribution it will make to the goal of energy transition and, by extension, reduction of carbon emissions. The Index is weighted in favour of commodities with the highest ETDRs, in line with the methodology outlined immediately below and in the Index methodology.

The Energy Transition Demand Rating of a Relevant Commodity is calculated as its 3-year estimated consumption through its use in energy transition-related activities divided by current total consumption of the Relevant Commodity. In addition, each Relevant Commodity receives a market balance rating, which is calculated as the average of the estimated surplus or deficit supply of each Relevant Commodity divided by its annual total consumption over the previous 2 years (the “Market Balance Rating”). The Market Balance Rating takes into account the total consumption of the Relevant Commodity, not only the energy-transition related consumption. For each Relevant Commodity, the intensity rating is calculated as 2/3 of ETDR plus 1/3 of Market Balance Rating (the “Overall Intensity Rating”). The Index is weighted by the Overall Intensity Rating (i.e., the target weight of each metal reflects its proportional share based on the Overall Intensity Rating) subject to diversification and liquidity caps as further defined in the Index methodology.

Data sources and processing

The Fund is a passively managed index tracking fund and attains the environmental characteristic it promotes by tracking the Index. As such, WisdomTree uses Index composition data as provided by the Index provider to implement the investment strategy of the Fund. Data provided by the Index Provider is used to select Relevant Commodities based on a scoring process. This process identifies exposure and growth metrics for each Relevant Commodity and selects and weighs the commodities accordingly as set out in the Index methodology.

The Index as well as the Fund utilises the Energy Transition Demand Rating which is a model-based estimation that assesses the quantitative exposure and growth metrics for each Relevant Commodity within the usage in energy transition solutions as further described above.

Monitoring of the Index Provider is carried out annually as part of WisdomTree's enhanced oversight and due diligence processes. This due diligence includes evaluating methodologies adopted by the Index Provider to assess constituent securities, the sources of information that they use and the quality of the ESG data they provide.

Limitations to methodologies and data

To meet the stated investment objective and policy of the Fund, WisdomTree relies on data provided by the third-party specialist, which may be incomplete, inaccurate, or unavailable. The Index Provider also places reliance on third-party specialists’ expertise to select Relevant Commodities and as such there may be inherent risks associated with errors in third-party data which may not be detected by WisdomTree or the Index Provider.

As a result, there is a risk that the Index Provider or the third-party specialist may incorrectly assess a Relevant Commodity as being associated with energy transition themes. This may result in the incorrect inclusion or exclusion of a Relevant Commodity from the Index and therefore the portfolio of the Fund or an incorrect measurement of the environmental characteristic promoted by the Fund. WisdomTree seeks to mitigate this risk by obtaining data from reputable sources.

Please refer to the section above ""Data Sources and Processing"" and ""Due Diligence"" regarding internal controls to monitor constituent data.

Where a Relevant Commodity is identified as not meeting the environmental characteristic of the Fund, it will be removed from the Index at the next scheduled rebalance. The Fund may cease to meet its stated environmental characteristic between index rebalances until the Index is rebalanced back in line with the Index methodology, at which point the Fund will also be rebalanced in line with the Index.

Third-party specialists may have different business interests that could give rise to conflicts of interest when assessing the association of a Relevant Commodity with energy transition themes.

These limitations do not impact on the Fund's ability to achieve its objective of tracking the Index as the Fund utilises the index composition data disseminated by the Index Provider to attain the environmental characteristic that it promotes.

Due diligence

WisdomTree carries out initial and ongoing due diligence on the Index Provider and reference Index as well as other data providers prior to the launch of the Fund.

As part of this due diligence, WisdomTree assesses the Index methodology to determine whether it would achieve the desired investment outcome and environmental characteristic promoted by the Fund.

This evaluation includes the universe of eligible commodities and degree of coverage by third-party specialists in the energy transition industry.

Engagement policies

As a responsible investor, WisdomTree adopts an active ownership approach to promote better corporate behaviour in investee companies in terms of sustainability and management of Environmental, Social and Governance risks.

WisdomTree exercises voting rights and constructively engages with investee companies through its investment managers, to whom portfolio management activities are outsourced. In selecting and monitoring investment managers, WisdomTree ensures that voting and engagement policies of the Investment Managers match the standards defined by WisdomTree.

Further details on WisdomTree's proxy voting policy are available at https://www.wisdomtree.eu/en-gb/wisdomtree-investment-governance and on WisdomTree voting dashboard available at: https://www.wisdomtree.eu/en-ie/proxy-voting-dashboard.

Designated reference benchmark

The Index has been designated as a reference benchmark to meet the environmental characteristic promoted by the Fund.

The Index has been selected on the basis that it aligns with the environmental characteristic promoted by the Fund which is the reduction in carbon emissions generated, primarily by investing in Relevant Commodities that are associated with energy transition themes. Information on how the Index is aligned with the environmental characteristic promoted by the Fund, including the input data, the methodologies used to select those data, the rebalancing methodologies and how the Index is calculated can be found here.
