

WisdomTree Recycling Decarbonisation UCITS ETF - USD Acc

Sustainability-related disclosure

Summary

Aucun objectif d'investissement durable

Aucun préjudice important à l'objectif d'investissement durable.

Le Fonds réplique l'indice Tortoise Recycling Decarbonization UCITS Index (l'Indice). L'Indice est conçu de manière à garantir que les investissements durables qu'il inclut ne causent pas de préjudice important et ce, grâce à l'instauration de critères d'exclusion et de sélection environnementaux, sociaux et de gouvernance (ESG) qui tiennent compte des indicateurs de principales incidences négatives (Indicateurs de PAI) sur la base du Tableau 1 en Annexe I des Normes techniques de réglementation établies par le Règlement 2019/2088 (RTS du SFDR). L'Indice applique des filtres d'exclusion fondés sur des normes et des valeurs, comme indiqué dans la méthodologie de l'Indice.

Objectif d'investissement durable du Fonds

Le Fonds a un objectif d'investissement durable dans des entreprises liées aux activités de transformation des déchets en énergie et de recyclage qui contribuent à des objectifs environnementaux en faveur de l'atténuation du changement climatique et à l'économie circulaire. Le Fonds réalise cet objectif par réplication de l'Indice.

Stratégie d'investissement

L'objectif d'investissement du Fonds consiste à répliquer la performance de l'Indice en termes de cours et de rendement, avant déduction des commissions et frais. Pour atteindre cet objectif, le Fonds emploiera une approche d'investissement de « gestion passive » et investira dans un échantillon représentatif de titres qui composent l'Indice, lequel est conçu pour répliquer la performance de sociétés impliquées dans les technologies de recyclage et de gestion des déchets qui s'inscrivent dans la mégatendance de décarbonation dans le monde. L'Indice a été désigné comme référentiel fin d'appuyer l'objectif d'investissement durable du Fonds.

Part des investissements

Le Fonds investira la totalité ou la quasi-totalité de ses actifs dans les composantes de l'Indice, de sorte que la valeur liquidative (VL) du Fonds soit composée d'investissements durables à proportion minimale de 90%.

Contrôle de l'objectif d'investissement durable

WisdomTree contrôle la réalisation de l'objectif d'investissement durable du Fonds lors de chaque rééquilibrage de l'Indice.

Méthodologies

Le Fonds évalue dans quelle mesure son objectif d'investissement durable est réalisé au moyen des données obtenues du Fournisseur d'indice et de fournisseurs de données tiers, le cas échéant.

Traitement et sources des données

Le Fonds est un fonds indiciel à gestion passive et atteint son objectif d'investissement durable par réplification de l'Indice. WisdomTree traite les données obtenues de fournisseurs de données tiers pour filtrer les émetteurs sur la base des critères d'exclusion ESG et ce, afin d'établir l'univers d'investissement éligible.

Limites des méthodologies et données

Pour répondre à l'objectif ainsi qu'à la politique d'investissement spécifiés du Fonds, WisdomTree s'appuie sur des données ESG obtenues de fournisseurs tiers qui peuvent s'avérer incomplètes, inexactes ou indisponibles. Il existe également un risque que le Fournisseur d'indice ou d'autres fournisseurs de données (le cas échéant) évaluent de manière incorrecte la notation ESG ou l'implication d'une société dans certaines activités.

Diligence raisonnable

WisdomTree exerce son devoir de diligence raisonnable concernant le Fournisseur d'indice et l'Indice de référence en amont du lancement du Fonds, afin de déterminer la capacité à atteindre le résultat d'investissement désiré et l'objectif d'investissement durable du Fonds.

Politiques d'engagement

WisdomTree exerce des droits de vote et s'engage de manière constructive auprès des entreprises bénéficiaires des placements, par l'intermédiaire de ses gestionnaires d'investissement auxquels les activités de gestion de portefeuille sont confiées. Lors de la sélection et du suivi des gestionnaires d'investissement, WisdomTree s'assure que leurs politiques de vote et d'engagement correspondent aux normes qu'elle a définies.

Réalisation de l'objectif d'investissement durable.

L'Indice a été désigné comme indice de référence afin de respecter l'objectif d'investissement durable du Fonds. Les informations sur l'Indice sont consultables [ici](#).

No significant harm to the sustainable investment objective

The Fund tracks the Tortoise Recycling Decarbonization UCITS Index. The Index is designed to ensure that sustainable investments included in the Index do not cause significant harm to other environmental or social objectives by implementing ESG exclusionary screening and selection criteria that takes account of PAI Indicators based on Table 1 of Annex I of the RTS. The Index applies norms and values-based exclusion screens as detailed in the Index methodology.

The ESG exclusionary criteria are aligned with certain mandatory PAI Indicators such as exposure to fossil fuels, controversial weapons, non-renewable energy consumption and production and violations of UN Global Compact Principles (UN GCPs) and OECD guidelines. Each PAI Indicator is individually assessed and compared, where relevant, against an absolute or relative threshold having regard to the individual PAI Indicator and underlying metric set out in SFDR RTS. PAI Indicator performance is assessed quarterly at the Fund level based on a tailored PAI dataset received from the Investment Manager and third-party data provider. An investee company's performance, either overall or on certain PAI Indicators may be assessed possibly leading to engagement with the issuer and tracking performance after the engagement based on relevant PAI-related KPI and / or exclusion from the investable universe.

In addition, the Index the Index applies a tiered screening approach which includes a review of companies' carbon emissions data reported in a company's most recent annual or quarterly report and/or sustainability report as assessed by the Index Provider and set out in the Index methodology.

The Index methodology includes robust governance criteria whereby companies are assessed based on the Global Standards Screening (GSS) assessment which identifies and excludes from the eligible investment universe companies that violate or are at risk of violating international norms and standards, such as UNGCPs, UN Guiding Principles on Business and Human Rights (UN GPs) and OECD Guidelines for Multinational Enterprises and their underlying conventions. Companies on the UN, US and EU sanctions list are excluded. In addition to the governance screening, to be eligible for inclusion in the Index, a company must be listed on an eligible stock exchange listed in the Index methodology and must comply with securities listing rules including relevant corporate governance codes.

Based on the DNSH assessment, the sustainable investments made by the Fund do not significantly harm any other environmental or social objective.

Sustainable investment objective of the financial product

The Fund has a sustainable investment objective of investing in companies involved in waste-to-energy and recycling activities which contributes to environmental objectives of climate change mitigation and circular economy. Waste-to-energy activities include waste disposal processes used to generate energy from waste such as garbage, animal manure, products and/or animal fats. This process generates clean energy and has a positive effect on energy-related greenhouse gases. In addition, recycling activities include plastics recycling which helps prevent, amongst others, ocean plastic pollution.

The Fund achieves this objective by tracking the Index, which has a methodology that is aligned with attaining the sustainable investment objective of the Fund.

Investment strategy

The investment objective of the Fund is to track the price and yield performance, before fees and expenses, of the Index. To achieve this objective, the Fund will employ a "passive management" (or indexing) investment approach and will invest in a representative sample of component securities of the Index which is designed to track the performance of companies primarily involved in waste-to-energy and recycling activities. The Index has been designated as a reference benchmark for the purpose of supporting the sustainable investment objective of the Fund.

The Index only includes companies from eligible Global Industry Classification Standard (GICS) sub-industries which derive at least 20% of revenue, or operating profit, or own assets, or 20% of the company's capital expenditure is in decarbonising waste management and recycling related businesses. The tiered screen applied by the Index reviews companies' involvement in the waste-to-energy and recycling activities and emissions data to evaluate emissions avoided as described in the Index methodology. The tiered weighting approach aims to overweight companies with higher exposure to waste-to energy and recycling activities and companies with zero or negative reported carbon emissions.

In addition, the Index applies ESG exclusionary criteria and seeks to exclude companies from the eligible investment universe that are significantly involved (as described in the Index methodology) in thermal coal, conventional and unconventional oil and gas exploration/production and in the tobacco industry and small arms sectors. Companies with any involvement in controversial weapons are also excluded from the eligible investment universe by the Index.

To be included in the Index, a security must be issued by a company operating a business related to waste-to- energy and recycling. The preliminary universe of companies is identified based on the following screens:

- Companies that derive revenue, operating profit, own assets or capital expenditures in decarbonizing waste-to-energy and recycling related businesses included in the Index provider's proprietary database of global energy companies.
- Waste-to-energy business activity includes production of renewable natural gas and renewable diesel. It also includes production of ethanol and other biomass like wood waste.
- Recycling business activity includes traditional recycling activities such as glass, paper and cardboard recycling as well as recycling plastics into original materials such as polypropylene for re-use. In addition, includes lithium-ion battery recycling as well as companies engaged in carbon capture and sequestration.

The Index methodology includes good governance criteria whereby companies are assessed based on the GSS assessment described above. The GSS assessment identifies and excludes companies from the eligible investment universe that violate or are at risk of violating certain commonly accepted international norms and standards, such as United Nations and OECD guidelines.

The Fund, through its Investment Manager, adopts an active ownership policy and believes in constructive engagement and exercising voting rights to promote stronger corporate governance and better management of ESG risks in investee companies.

Proportion of investments

The Fund will invest all, or substantially all, of its assets in the constituents of the Index with the result that a minimum of 90% of the Fund's NAV will be aligned with the sustainable investment objective of the Fund.

Up to 10% of the Fund's assets may be invested in ancillary liquid assets in accordance with the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, or invested in assets for which there is insufficient ESG-related data. This applies in particular to assets for which ESG factors are insufficiently defined at present or which are not covered by third-party data providers.

For more information, please see the Supplement for the Fund.

Monitoring of environmental or social characteristics

The Fund achieves the sustainable investment objective outlined above by tracking the Index. WisdomTree monitors the attainment of the Fund's sustainable investment objective at the time of each Index rebalance. This is carried out by evaluating whether the Index is correctly applying the stated ESG exclusionary and GSS assessment criteria outlined in detail above as well as determining the proportion of the Fund's investments active in waste-to-energy and recycling business activities in line with the Index methodology. This includes an evaluation by WisdomTree of ESG data, including sustainable investment data which is provided by third-party data providers. As described more fully in the Index methodology, sustainable investment indicators used comprise of a company's revenue, operating profit, assets or capital expenditure used to measure the perceived degree of involvement in waste to energy and recycling activities and is derived from each company's most recent annual report or quarterly report, and/or sustainability report (as assessed by the Index Provider).

WisdomTree also monitors the tracking error of the Fund and reports this to investors as part of the publication of annual and interim financial statements of the ICAV. Information on the anticipated tracking error is also published in the Supplement for the Fund.

Methodologies

The extent to which the sustainable investment objective of the Fund is attained is measured using data provided by the Index Provider and third-party data providers, where relevant.

The Index methodology is assessed by the Fund as being aligned with its sustainable investment objective of investing in companies being involved in waste to energy and recycling business activities. This assessment is carried out by the Fund at the time of each Index rebalance and is based on quantitative measures to evaluate the waste to energy and recycling categories described in the Index methodology. The relevant thresholds for evaluating the waste to energy and recycling categories are described in the Index methodology.

The Index excludes companies based on ESG exclusionary and GSS assessment criteria described above and in the Index methodology. The ESG exclusionary criteria are applied based on companies' revenue levels at the time of each Index rebalance using data provided by third-party data providers.

Data sources and processing

The Fund is a passively managed index tracking fund and attains its sustainable investment objective by tracking the Index.

WisdomTree processes data provided by its ESG Data Provider to screen issuers based on the ESG exclusionary criteria as set out in the Index Methodology in order to establish the eligible investment universe.

Monitoring of the Index Provider and third-party data providers is carried out annually as part of WisdomTree's enhanced oversight and due diligence processes. This due diligence includes evaluating the methodologies adopted by our ESG Data Provider to assess issuers, the sources of information that they use and the quality of ESG data they provide. ESG Data coverage provided by third-party data providers is also assessed at the time of each Index rebalance.

WisdomTree uses data sources from other third-parties for comparison purposes to identify any potential data inconsistencies. There may be issuers for which insufficient ESG-related data is available due to a lack of coverage by third-party data providers.

Data estimates may be used by third-party data providers particularly for smaller companies or where there are gaps in company reported data or where a company does not report actual revenues for certain business involvement categories.

Limitations to methodologies and data

To meet the stated investment objective and policy of the Fund, WisdomTree relies on ESG data provided by third-party data providers and may be incomplete, inaccurate, or unavailable. As a result, there is a risk that the Index Provider or other data providers (as applicable) may incorrectly assess the ESG rating or the involvement of a company in certain activities as part of the ESG exclusionary criteria applied by the Index Provider. This may result in the incorrect inclusion or exclusion of a security from the Index and therefore the portfolio of the Fund.

Please refer to the section above "Data Sources and Processing" and "Due Diligence" regarding internal controls to monitor constituent data.

In placing reliance on external data providers, there may be inherent risk associated with errors in third-party data which may not be detected by WisdomTree or the Index Provider. The result being that companies may from part of the investment universe that are inconsistent with the stated methodology of the Index and/or the stated investment objective/policy of the Fund. WisdomTree seeks to mitigate this risk by obtaining ESG data from reputable sources, using a second independent data source and investigating data differences to our primary ESG data provider.

Where an index constituent is identified as not meeting the stated sustainable investment objective of the Fund, it will be removed from the Index at the next scheduled rebalance (or periodic review). The Index may cease to meet the stated ESG criteria between index rebalances until the Index is rebalanced back in line with the Index methodology, at which point the Fund will also be rebalanced in line with the Index.

ESG Data Providers may have different business interests that could give rise to conflicts of interest when assigning ESG ratings or assessing the involvement of a company in certain activities.

Due diligence

WisdomTree carries out due diligence on the Index Provider and reference Index prior to the launch of the Fund.

As part of this due diligence, WisdomTree assesses the Index methodology to determine whether it would achieve the desired investment outcome and the sustainable investment objective of the Fund. This evaluation includes the investment universe of the Index, coverage by third-party ESG data providers, ESG exclusionary criteria and security weighting methodology.

The evaluation also ensures that the Fund's sustainable investment objective does no significant harm to other environmental or social objectives. In addition, WisdomTree monitors PAIs indicators on sustainability factors of investee companies at the Fund level on a quarterly basis using an internally developed monitoring system and data received from the Investment Manager and the third-party ESG data provider.

Engagement policies

As a responsible investor, WisdomTree adopts an active ownership approach to promote better corporate behaviour in investee companies in terms of sustainability and management of Environmental, Social and Governance risks.

WisdomTree exercises voting rights and constructively engages with investee companies through its investment managers, to whom portfolio management activities are outsourced. In selecting and monitoring investment managers, WisdomTree ensures that voting and engagement policies of the Investment Managers match the standards defined by WisdomTree.

Further details on WisdomTree's proxy voting policy are available at <https://www.wisdomtree.eu/en-gb/wisdomtree-investment-governance> and on WisdomTree voting dashboard available at: <https://www.wisdomtree.eu/en-ie/proxy-voting-dashboard>.

Attainment of the Sustainable Investment Objective

The Index has been designated as a reference benchmark and is designed to track the performance of companies primarily involved in waste-to-energy and recycling. Waste-to-energy activities include waste disposal processes used to generate energy from waste such as garbage, animal manure, products and/or animal fats. This process generates clean energy and has a positive effect on energy-related greenhouse gases. In addition, recycling activities include plastics recycling which helps prevent, amongst others, ocean plastic pollution. The Fund has determined that tracking the Index will enable it to meet its sustainable investment objective.

Information on how that Index is aligned with the sustainable investment objective of the Fund, including the input data, the methodologies used to select those data, the rebalancing methodologies and how the index is calculated can be found in the index methodology [here](#).
